

# CYMBAL-MART

## Visual Merchandising & Store Safety Standards Protocol

### 1. SLIPS, TRIPS, AND FALLS PREVENTION

**Objective:** Maintain floor integrity to ensure zero-incident traversal for customers and staff.

- **Wet Floors:** Any liquid spill must be cordoned off immediately with high-visibility "Wet Floor" signage. Floors must be mopped dry promptly.
- **Cluttered Aisles:** No cardboard boxes, plastic wrap, or stray merchandise is permitted on the sales floor.
- **Uneven Surfaces:** Transitions between flooring types (e.g., tile to carpet) must be flush. Loose floor mats must be taped down or replaced.
- **Maintenance:** Routine checks for cracked tiles or protruding floor fixtures are mandatory every 4 hours.

### 2. CLEAR AND SAFE PATHWAYS

- **Aisle Width:** Minimum clearance of 48 inches must be maintained in all primary "Power Alleys" to allow for two-way cart traffic and ADA compliance.
- **Unobstructed Flow:** Temporary promotional displays (PDQs/Sidekicks) must not narrow the walking path below safety minimums.
- **Exits:** All emergency exits must be clear of pallets and trash. Exit signage must be illuminated and visible from a distance of 50 feet.

### 3. PROPER STORAGE & MERCHANDISING

- **Vertical Stacking:** Merchandise on "Top Stock" shelves must be pushed back 2 inches from the edge and stacked no higher than 20 inches.
- **Heavy Items:** Items exceeding 25 lbs (e.g., large bags of dog food, furniture) must be stored on bottom shelves or specialized floor pallets.
- **Stability:** Use "fencing" or shelf-dividers for round or unstable products to prevent rolling and falling.

## 4. FIRE SAFETY & EMERGENCY PREPAREDNESS

---

- **Equipment Access:** A 36-inch clearance zone must be maintained around all fire extinguishers and pull stations.
- **Sprinkler Clearance:** No merchandise or signage may be hung within 18 inches of a sprinkler head.
- **Electrical Safety:** Extension cords are prohibited for permanent fixtures. Daisy-chaining power strips is a critical violation.

## 5. GENERAL CLEANLINESS AND ORDER

---

- **Debris Management:** Daily "Zone Defense" sweeps must occur to remove discarded packaging, receipts, or hangers.
- **Zoning/Facing:** All products must be "faced" to the front edge of the shelf to create a neat, organized appearance and prevent reaching hazards.
- **Dusting:** Shelves and fixtures must be free of visible dust and grime to maintain the brand's professional image.

## 6. LIGHTING AND SIGNAGE STANDARDS

---

- **Illumination:** All overhead LED bays must be functional. Flickering lights must be reported to maintenance within 1 hour.
- **Accurate Pricing:** "Was/Now" signage must be current. Expired promotional signs are a merchandising violation.
