Cymbal Meet — Intervention Templates

Standardized Templates for Customer Engagement Interventions

Version 1.4 | Last Updated: Januarmp

> *Pinnacle Financial Group currently has a 25% active login rate across 1,800 licensed Cymbal Meet seats, significantly below the enterprise benchmark of 75%. Analysis indicates that 1,200 seats from the recent Apex Communications acquisition remain on legacy videoconferencing tools. This adoption plan outlines a 90-day strategy to achieve 65%+ login rates by transitioning the acquired workforce to Cymbal Meet.*

Section 2: Current State Assessment

Metric	Current Value	Segment Benchmark	Gap
Active login rate	[value]	[benchmark]	[gap]
Meetings/user/month	[value]	[benchmark]	[gap]
Ad-hoc calls ratio	[value]	[benchmark]	[gap]
Platform diversity	[value]	[benchmark]	[gap]

Include a brief analysis of what's driving the gap — not just the numbers but the underlying cause (e.g., legacy tool persistence, missing calendar integration, lack of training).

Section 3: Root Cause Analysis

Identify the specific reasons for low adoption. Common root causes include:

- **Legacy tool persistence** — Users have not been transitioned from a previous platform
- **Insufficient training** — Users don't know how to use Cymbal Meet effectively
- **Missing executive sponsorship** — No visible leadership endorsement
- **Configuration gaps** — Calendar integration not set up, SSO issues, client not deployed
- **Feature restrictions** — IT policies disabling features users need (ad-hoc calls, screen sharing)

Section 4: Recommended Actions

Provide a numbered list of specific, actionable steps with owners and timelines.

Example Actions:

1. **Identify and Appoint Champions from Acquired Organization** (Week 1)
   - Select 3-5 respected individuals from the former Apex team
   - Brief them on Cymbal Meet features and the migration plan
   - Provide champion toolkit (quick-start guide, FAQ, escalation path)
2. **Executive Communication** (Week 1-2)
   - Acquired organization leadership sends endorsement email
   - Schedule a town hall on Cymbal Meet hosted by a senior leader from the acquired team
3. **Phased Migration** (Weeks 3-12)
   - Week 3-4: Deploy Cymbal Meet client to acquired users alongside legacy tool
   - Week 5-8: Champions lead department-level intro sessions
   - Week 9-10: Migrate recurring meetings to Cymbal Meet calendar integration
   - Week 11-12: Disable new meeting creation on legacy tool
4. **Training Delivery** (Weeks 3-8)
   - Schedule Tier 1 training sessions specifically for acquired users
   - Record sessions for on-demand access

    - Follow up with non-attendees within 3 business days

5. **Weekly Progress Tracking** (Ongoing)
    - Monitor acquired cohort login rate separately
    - Weekly checkpoint with champions
    - Escalate to CSM if login rate is below 30% at Week 6

Section 5: Success Criteria

Milestone	Target Date	Metric
[Milestone 1]	[Date]	[Specific metric and target]
[Milestone 2]	[Date]	[Specific metric and target]
[Milestone 3]	[Date]	[Specific metric and target]

Section 6: Resources and Support

- Links to relevant Cymbal Meet documentation
- Champion toolkit materials
- Training session recordings
- CSM contact information and escalation path

---

4. Template: Technical Remediation Plan

Use When

- Device telemetry shows degraded performance (high latency, packet loss, low quality scores)
- Call quality scores are consistently below 3.5
- Multiple conference rooms are experiencing simultaneous issues
- Users report audio/video problems that correlate with telemetry data

Document Structure

Section 1: Executive Summary

Example:

> *Coastal Logistics Inc. is experiencing severe device performance issues across all 35 conference rooms since their January office relocation. Telemetry data shows packet loss averaging 4% (vs. 0.3% baseline), network latency of 95ms (vs. 25ms baseline), and video quality scores of 2.2 (vs. 4.2 baseline). Root cause analysis indicates the new office network lacks QoS configuration for video traffic. This remediation plan provides a prioritized action list to restore normal performance within 14 days.*

Section 2: Impact Assessment

Metric	Current Value	Healthy Baseline	Severity
Network latency	[value] ms	25 ms	[Critical/Warning/Normal]
Packet loss	[value]%	0.3%	[Critical/Warning/Normal]
Video quality score	[value]	4.2	[Critical/Warning/Normal]
CPU usage	[value]%	35%	[Critical/Warning/Normal]

Affected [redacted]es	[count] of [total]	0	[scope]

User Impac[redacted]escribe how the technical issues are affecting end users (e.g., "Users report video freezing in 80% of m[redacted]gs, leading to a 40% drop in meeting room usage over the past 3 weeks").

Section 3: [redacted] Cause Analysis

Detail the t[redacted]cal root cause with evidence:

Example:

> *Network a[redacted]sment reveals that the new office at 500 Harbor Drive was provisioned with standard enterprise [redacted]vorking (Cisco Meraki switches, 1 Gbps uplinks) but without QoS policies for real-time communi[redacted] traffic. Cymbal Meet video traffic (UDP 10000-20000) competes with bulk data transfers, [redacted]d backups, and software updates during business hours. Packet captures confirm that video pac[redacted]are being queued behind large TCP flows, causing both latency spikes and packet drops when buf[redacted]verflow.*
>
> *Additiona[redacted]e conference room VLAN (VLAN 40) shares physical switch uplinks with the general office VLAN (VL[redacted]0), with no traffic prioritization between VLANs.*

Section 4: [redacted]ediation Steps

Priority 1 — [redacted]ediate (Days 1-3):

1. [Spec[redacted]chnical action with commands/configuration details]
2. [Spec[redacted]chnical action]

Priority 2 — [redacted]rt-Term (Days 4-7): 3. [Specific technical action] 4. [Specific technical action]

Priority 3 — [redacted]dation (Days 8-14): 5. [Monitoring and verification steps] 6. [Success criteria check]

Example R[redacted]iation Steps:

1. **Confi[redacted]DSCP QoS Markings** (Day 1)
   - C[redacted]ure all switches between conference rooms and WAN uplink to mark Cymbal Meet t[redacted]
     [redacted]udio (UDP, DSCP EF/46): Priority Queue
     [redacted]ideo (UDP, DSCP AF41/34): Assured Forwarding
     [redacted]ignaling (TCP 443, DSCP CS3/24): Class Selector
   - Refer to Cymbal Meet Device Performance Guide, Section 5 for complete DSCP configu[redacted]
2. **Create Ded[redacted]**
   - Move c[redacted]
   - Allocat[redacted]
3. **Verify Firew[redacted]**
   - Confirm[redacted]
   - Confirm[redacted]
   - Check [redacted]
4. **Firmware U[redacted]**
   - Update[redacted]

Docum

Section

Describe

Section

Categoriz

Segme
Active
At-risk
Lapsed

Section

Week 1:

- Confirm root cause of decline
- Identify any technical blockers (SSO issues, client bugs, network changes)
- Prepare re-engagement communications
- Brief champions on the campaign

Week 2-3: Outreach

- At-risk users: personalized email from champion or manager with specific call to action
- Lapsed users: re-onboarding email with updated quick-start guide and training link
- All users: internal communication from new/existing executive sponsor

Week 4-6: Reinforce

- Champions host "refresher" sessions for at-risk and lapsed users
- Gamification campaign to incentivize re-engagement (see Best Practices Guide, Section 6)
- Weekly adoption metrics shared with department managers

Week 7-8: Evaluate

- Compare adoption metrics to pre-decline baseline
- If recovery <70% of previous levels, escalate to executive briefing
- Transition to ongoing adoption monitoring

Section 4: Success Criteria

Metric	Pre-Decline Baseline	Current	Week 4 Target	Week 8 Target
Active login rate	[baseline]	[current]	[target]	[target]
Weekly meetings	[baseline]	[current]	[target]	[target]
At-risk user count	0	[current]	[target]	[target]

---

7. Template: Onboarding Acceleration Plan

Use When

- Initial deployment is behind schedule on adoption milestones
- Acquired workforce onboarding is stalling
- Specific departments are significantly behind the rest of the organization

Document Structure

Section 1: Gap Analysis

Milestone	Target Date	Status	Gap
60% first login	Day 7	[Actual %] by Day [actual]	[Gap description]
70% training complete	Day 14	[Actual %] by Day [actual]	[Gap description]
70% login rate	Day 30	[Actual %] by Day [actual]	[Gap description]

Section 2: Blockers Identified

List specific blockers preventing onboarding success:

Blocker	ted Users	Severity	Owner
[Blocker description]	nt or %]	[C al/High/Medium]	[Owner]

Common Blockers:

- SSO configuration issu eventing login
- Desktop client not dep to all target ma s
- Calendar integration n nfigured for Outl oogle Calendar
- Legacy tool still availa d preferred
- No department champ ssigned or chan s are ineffective
- Training sessions sche at inconvenient s or not promoted

Section 3: Acceleration Ac

Numbered list of specific ac to get onboardi ck on track, with owners and deadlines. Each action should directly address a bl from Section 2.

Section 4: Revised Timelin

Updated milestones with re dates based on cceleration plan.

---

8. General Format Guidelines

All intervention documents d follow these fo ing standards:

Branding

- Include Cymbal Meet l the document l r
- Use Cymbal Meet bra ors: Primary blue 73E8), Secondary gray (#5F6368)
- Font: Google Sans or Roboto for headings; Roboto for body text

Structure

- Every document starts with
- Use tables for metrics — eas
- Limit each section to one pa
- Include a "Next Steps" or "C

Tone

- Professional but approachab
- Data-driven — always includ
- Action-oriented — every sec
- Customer-facing sections sh "adoption failure")

Delivery

- Generate as PDF for formal
- Store in GCS at `gs://{bucket}/{customer_id}/{date}_{type}_{id}.pdf`
- Share link with CSM for distr
- CSM should present the doc
